

Site + Building Design Task Sheet

With redevelopment of the church sites, what is possible for the community of Jasper?

Your task :) is to build a 3D model of what's possible on the church lands. Sit back and let your inner architect and planner come out to play. You might be working alone, or with one or two other people. You don't have to agree with anyone. Just build what feels right to you.

Here's what to do with one, two or three other people, in any order that makes sense to you:

STEP ONE: Get familiar with the design outcomes

The Anglian Church, the United Church and the Municipality have agreed that redevelopment involves an opportunity to:

- Build a multi-faith worship space
- Develop community infrastructure and housing
- Develop a sustainable financial model that is a gift to future generations
- Honour the history and legacy of the churches in the Jasper community
- Honour the tragedy of the 2024 wildfire

Beyond these outcomes, the question is:

- **What else is possible? How can this site serve the community into the future?**

STEP TWO: Get familiar with the map and the site

There's some information on the map (see last page) that will be helpful to you before you get started. Have a look at:

- The neighbouring streets
- The property lines for each church site
- The municipal parking area
- The context (neighbouring roadways, intersections, pathways, buildings, properties)

STEP THREE: Put some building materials in your hands and fingers

Gather some building materials for you to use to build your 3D model. If no building materials feel right to you, pick up a few things to play with and see what happens.

Site + Building Design Task Sheet

STEP FOUR: Get designing

While you are working, notice the following (in any order that works for you) about what happens on the site:

- **Who** is spending time here, and what are they doing? How much space do they need? How much time do they need?
- **Who** is sharing space with others? Who has their own space?
- **What** happens inside or outside a building?
- **What** does not happen here, and why?
- Is there a **metaphor** that guides or represents your design?

To note: Business or commercial development is not possible on the site. Non-profit community organizations and activities are possible.

STEP FIVE: Label your 3D model

Please leave notes and labels on your model to let others know about your key ideas:

- What is the name of your 3D model?
- What are the main features of your design?
- What is hidden, not easy to see?
- What is not in your model, on purpose?
- What assumptions have you made?

STEP SIX: Photograph your 3D model

Tips for photographing your model:

- Make sure all labels and text are visible.
- Take photos from multiple angles.
- Use good lighting.

PLEASE PHOTOGRAPH YOUR WORK AND EMAIL IT TO:
